

ABC meeting – Napoli, 10-12 Aprile 2017

ASPETTI GENETICI E MOLECOLARI DELLA MALATTIA DI CUSHING

Guido Di Dalmazi

U.O. Endocrinologia

Dipartimento di Scienze Mediche e Chirurgiche
Alma Mater Studiorum – Università di Bologna
Ospedale S. Orsola-Malpighi – Bologna

Agenda

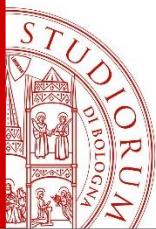

La genetica nella sindrome di Cushing

- Adenomi surrenalici sporadici
- Iperplasie surrenaliche macronodulari

Background genetico della malattia di Cushing

- *USP8* breakthrough

Conclusioni e take home message

Agenda

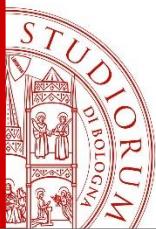

La genetica nella sindrome di Cushing

- **Adenomi surrenalici sporadici**
- Iperplasie surrenaliche macronodulari

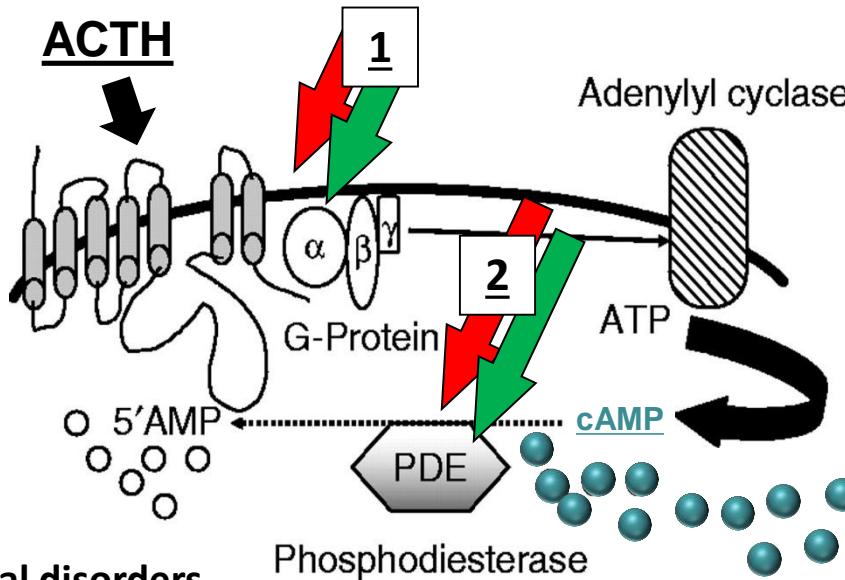

Background genetico della malattia di Cushing

- *USP8* breakthrough

Conclusioni e take home message

cAMP-PKA pathway e sindrome di Cushing Mutazioni germinali e somatiche

Familial disorders

1. McCune Albright syndrome

- Weinstein LS, NEJM, 1991
- Brown MJ, JCEM, 2010
- Carney JA, Am J Surg Pathol, 2011

2. Micronodular hyperplasia/PPNAD

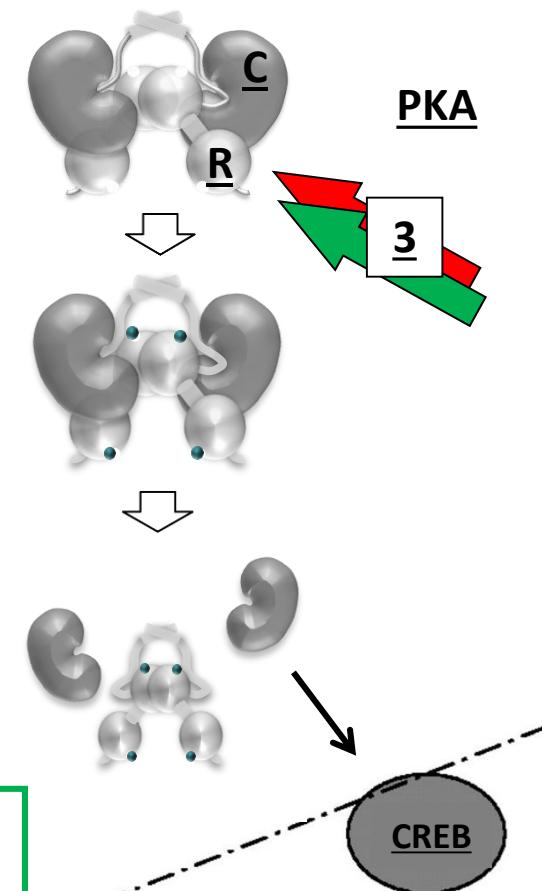

- Horvath A, Nat Genet, 2006
- Libè R, Clin Cancer Res, 2008

3. Carney complex (PPNAD)

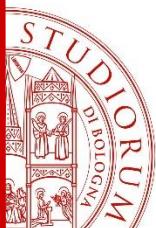

- Kirschner LS, Nat Genet, 2000
- Groussin L, Am J Hum Genet, 2002
- Horvath A, Nat Genet, 2006

Sporadic adenomas

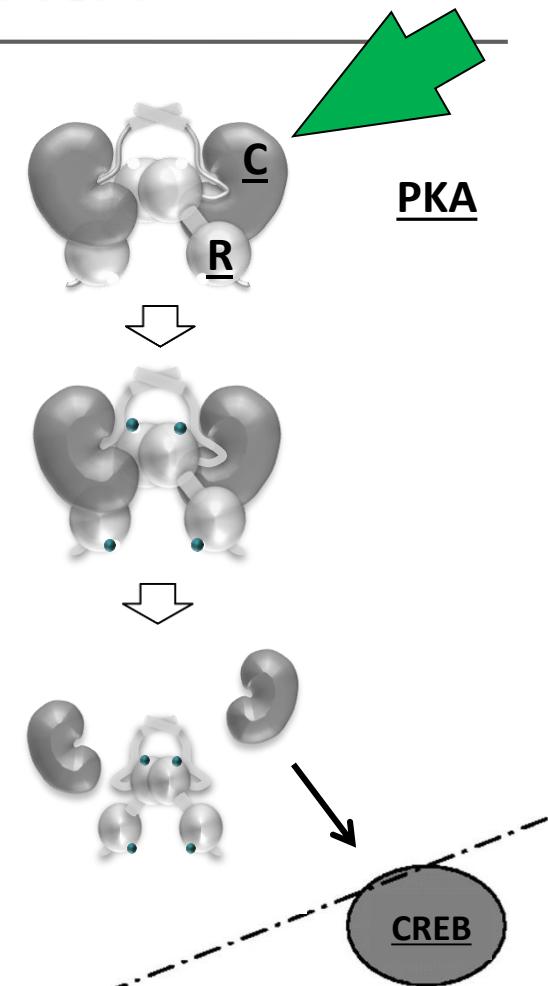

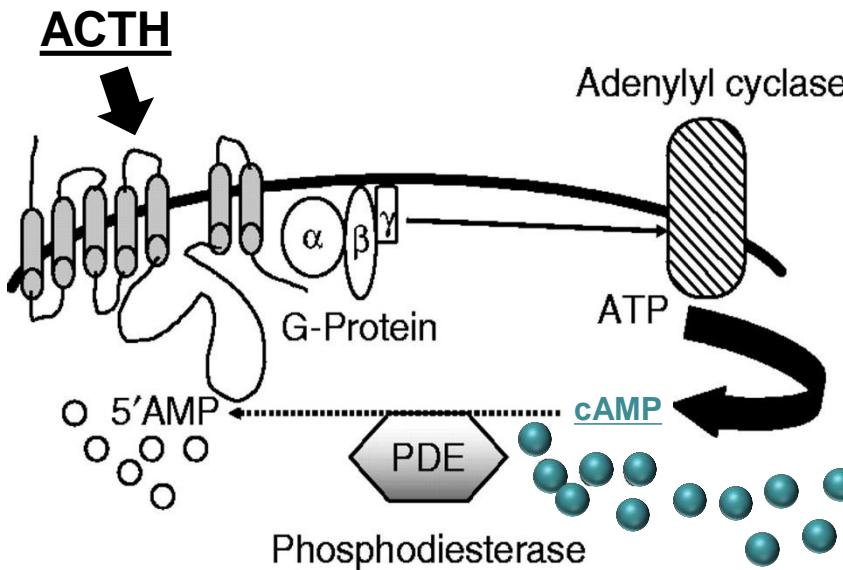

1. Fragoso MC, JCEM, 2003
2. Rothenbuhler A, Clin Endocrinol, 2012
3. Bertherat J, Cancer Res, 2003

Adapted from Vezzosi D, Eur J Endocrinol, 2011

cAMP-PKA pathway e sindrome di Cushing Mutazioni somatiche di *PRKACA*

Author	<i>PRKACA</i> +

Mutazioni somatiche di *PRKACA*

Prevalenza

Overt Cushing's syndrome

Overall (n=379)

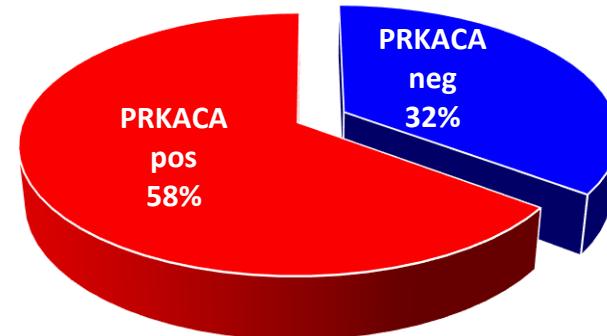

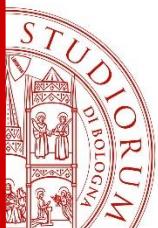

Europe/US (n=184)

Author	<i>PRKACA +</i>
Beuschlein F, NEJM, 2014	37.3%
Di Dalmazi G, JCEM, 2014	34.4%
Goh G, Nat Genet, 2014	34.5%
Thiel A, EJE, 2015	34.4%
Cao Y, Science, 2014	65.5%
Sato Y, Science, 2014	60.0%
Nakajima Y, Endocr J, 2014	23.1%
Li X, Clin Endocrinol, 2016	52.5%
Mean pooled prevalence	47.2%

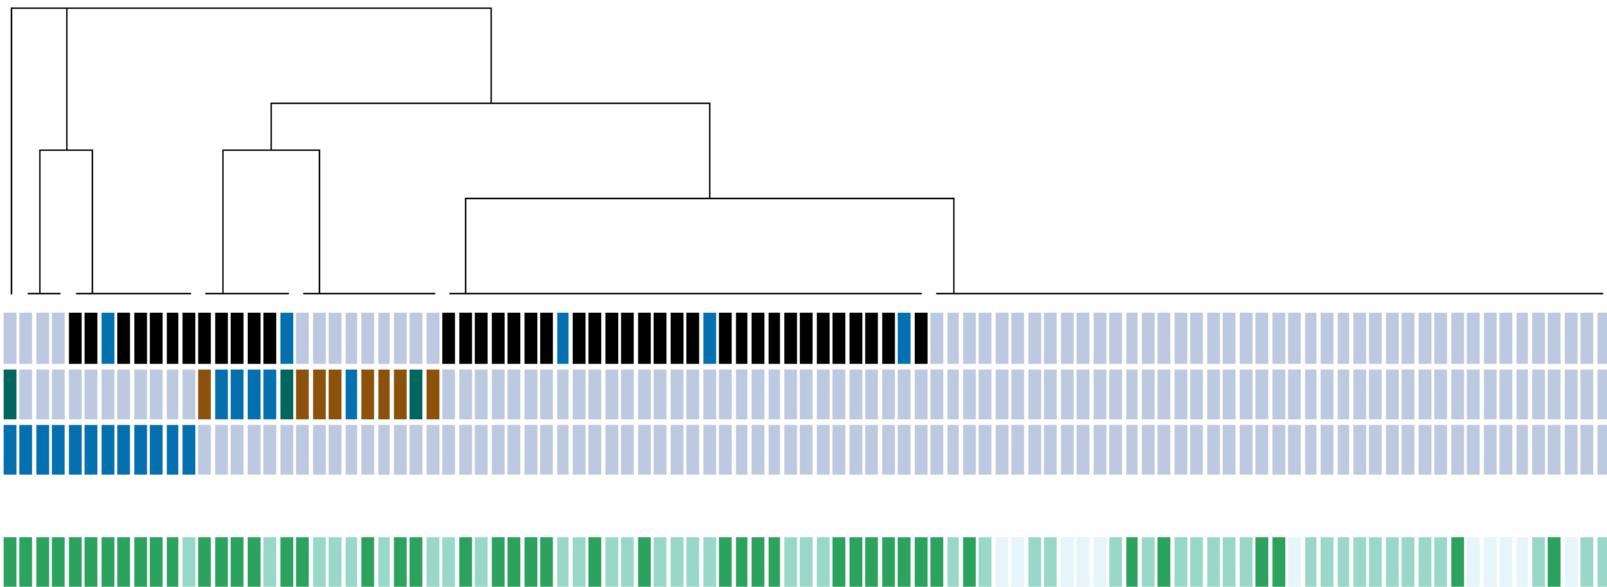

Asian (n=195)

Mutazioni somatiche in tumori PRKACA negativi

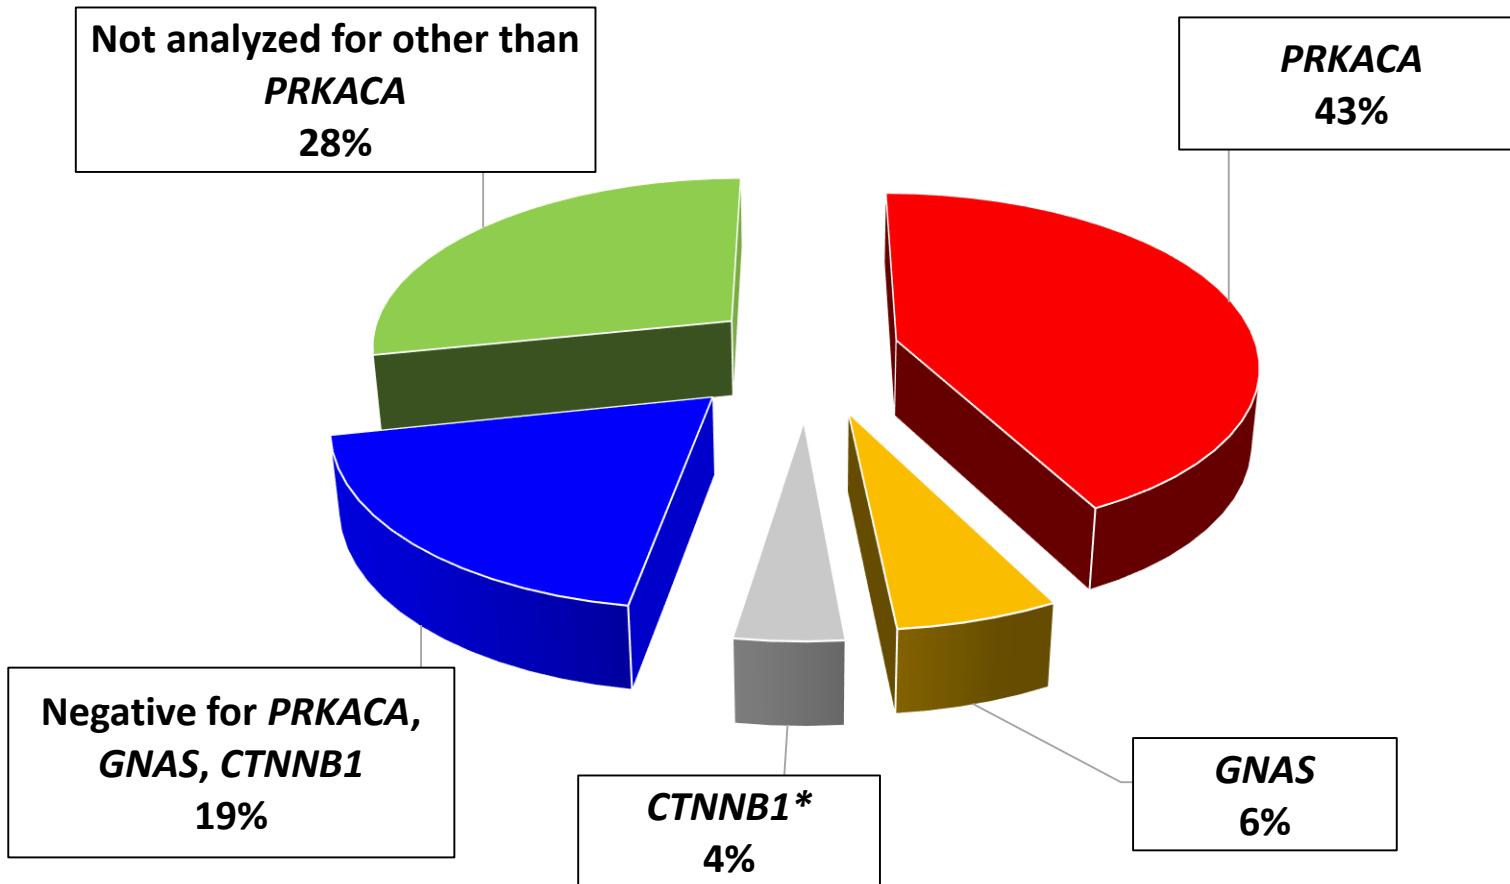

Legend:
Somatic mutation: no (light blue) yes (dark blue)
Number of somatic mutations: 0 (light green) 1-6 (medium green) >6 (dark green)

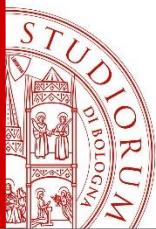

Ronchi CL, Di Dalmazi G, Faillot S, JCEM, 2016

Prevalenza di mutazioni in tutte le serie pubblicate

*May be not correctly estimated

Agenda

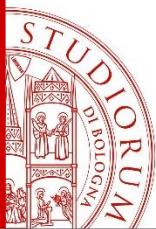

La genetica nella sindrome di Cushing

- Adenomi surrenalici sporadici
- **Iperplasie surrenaliche macronodulari**

Background genetico della malattia di Cushing

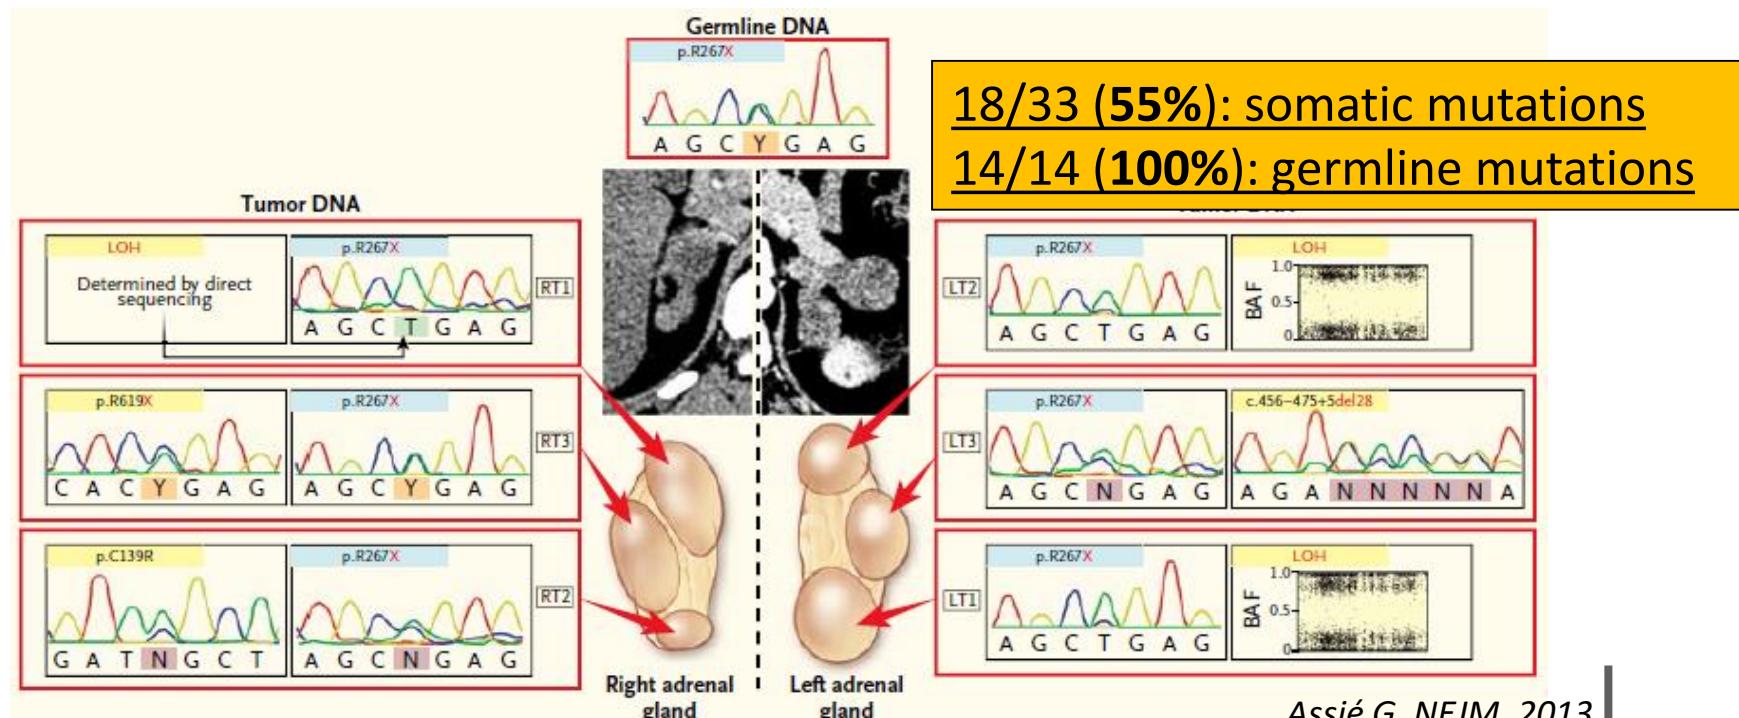

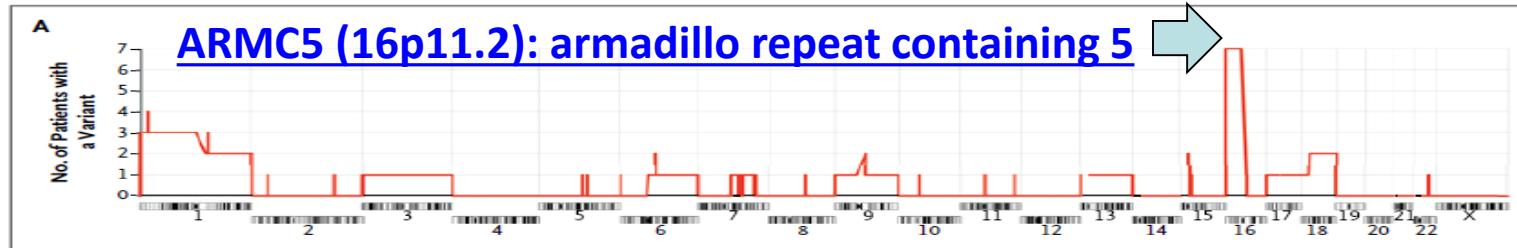

- *USP8* breakthrough

Conclusioni e take home message

ARMC5 e iperplasia macronodulare

GWAS and sequencing in 33 patients with macronodular hyperplasia

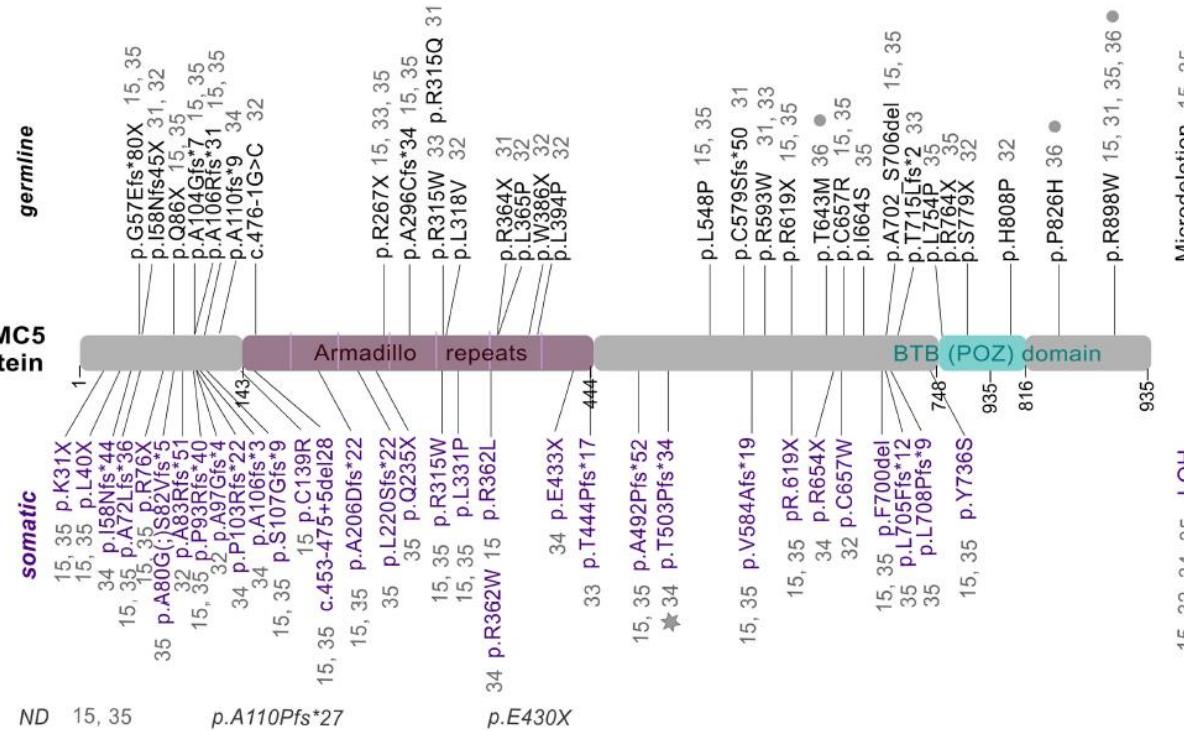

ARMC5 e iperplasia macronodulare

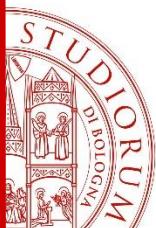

Confirmation studies

Mutations in 61/218 patients (28%) with PBMAH

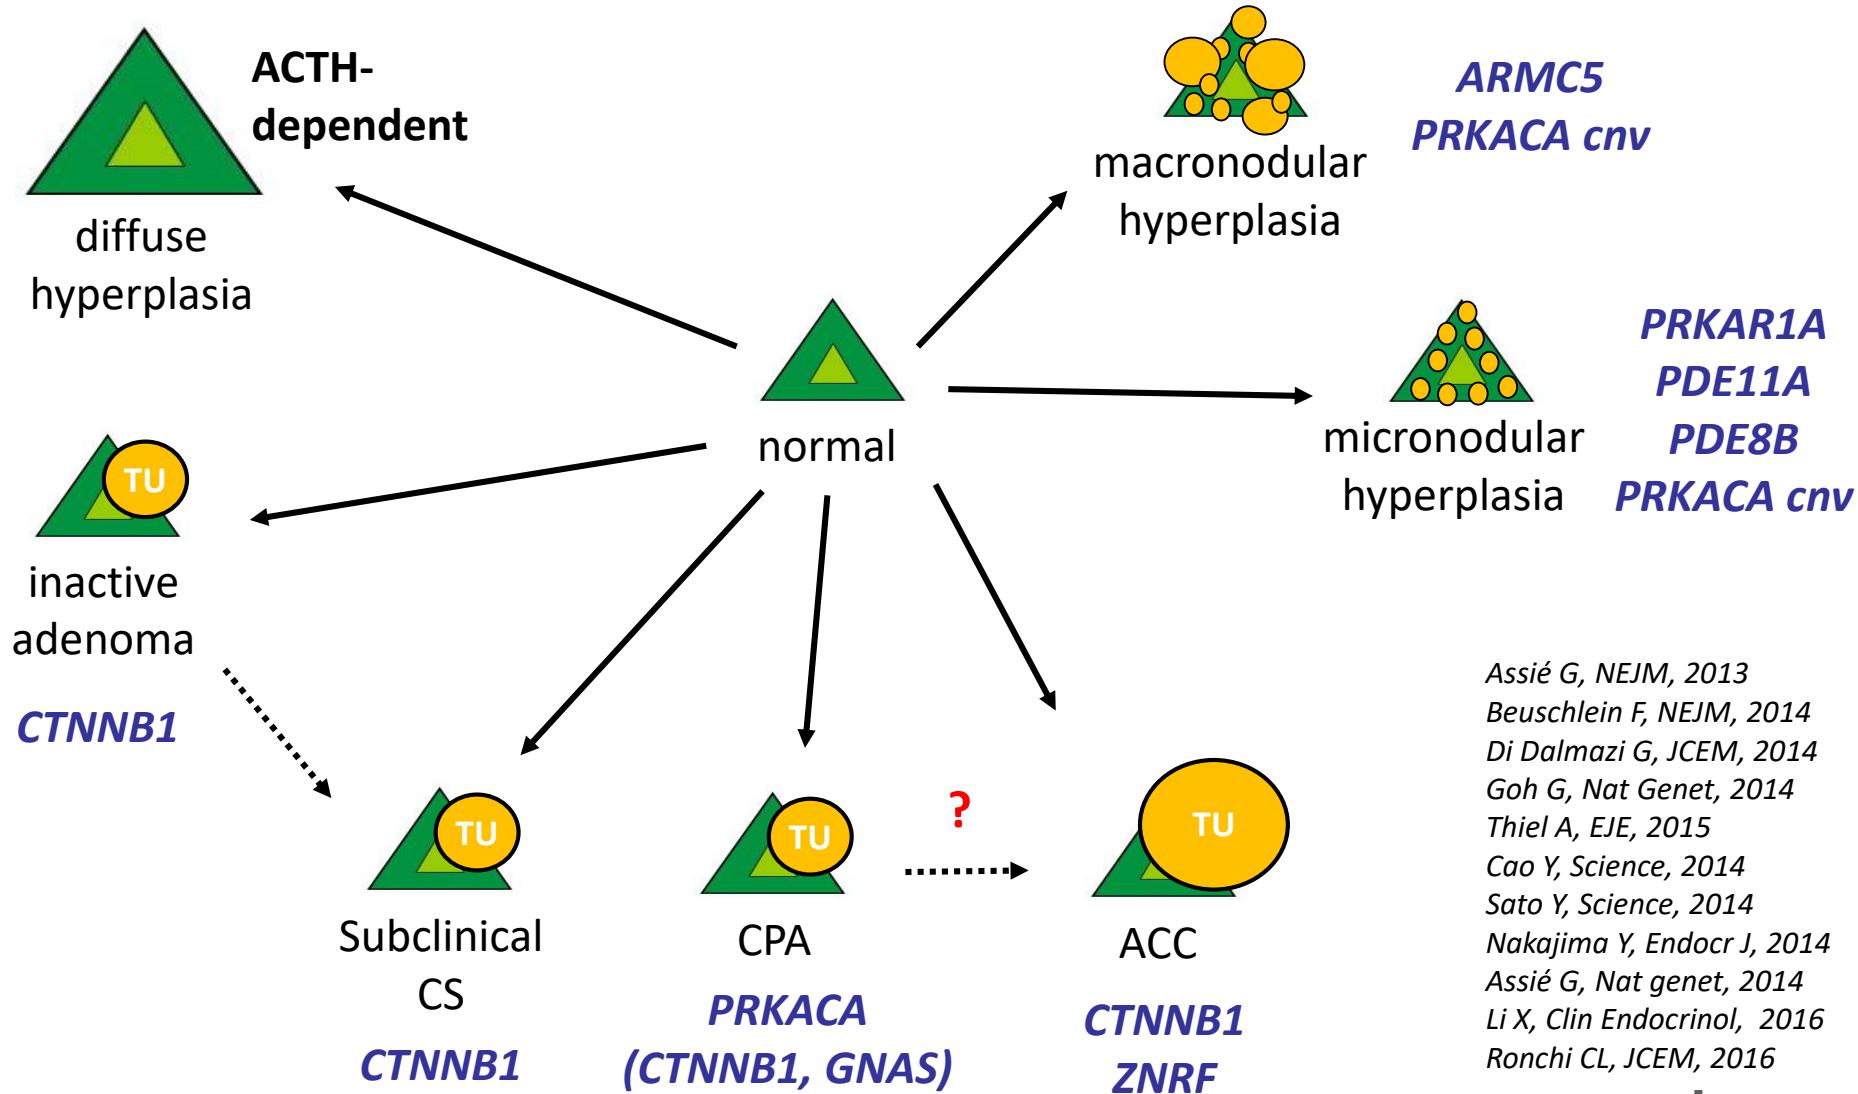

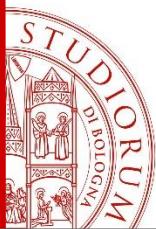

Drougat L, Front Endocrinol, 2015

Author	ARMC5 +
Assié G, NEJM, 2013	18/33 (55%)
Faucz FR, JCEM, 2014	7/34 (21%)
Espiard S, JCEM, 2015	24/98 (26%)
Albiger NM, JCEM, 2016	12/53 (23%)
Pooled mean prevalence	61/218 (28%)

Sindrome di Cushing: background genetico

Agenda

La genetica nella sindrome di Cushing

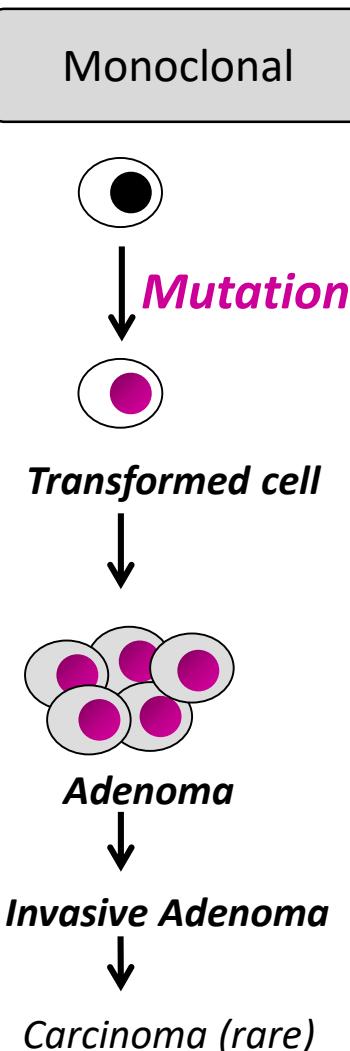

- Adenomi surrenalici sporadici
- Iperplasie surrenaliche macronodulari

Background genetico della malattia di Cushing

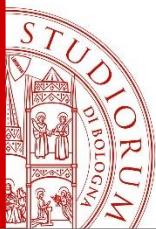

- ***USP8 breakthrough***

Conclusioni e take home message

Prevalenza fra sessi

Dimensione del tumore

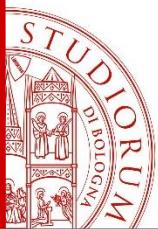

Mutazioni somatiche di *USP8*

Genotipo/fenotipo

Profilo ormonale

<i>Ma, Cell Res, 2015</i>	WT	<i>USP8</i> mut	P value
Age (yrs)	40 (30-46)	36 (26-42)	0.08
ACTH (pg/ml)	94 (61-163)	69 (51-106)	0.05
ACTH/size [(pg/ml)/cm]	51 (32-105)	103 (76-202)	<0.001
Midnight F (mcg/dl)	22 (16-31)	23 (18-29)	0.8
UFC (mcg/day)	650 (412-1168)	552 (262-977)	0.4
Post-op remission	73%	84%	0.2

<i>Reincke, Nat Genet, 2015</i>	WT	<i>USP8</i> mut	P value
ACTH (pg/ml)	90 ± 48	50 ± 46	NS
F after DST (mcg/dl)	21.1 ± 12.5	7.8 ± 9.7	<0.05

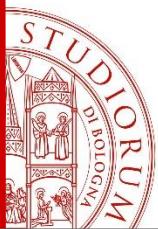

Mutazioni somatiche di *USP8*

Genotipo/fenotipo

Profilo ormonale

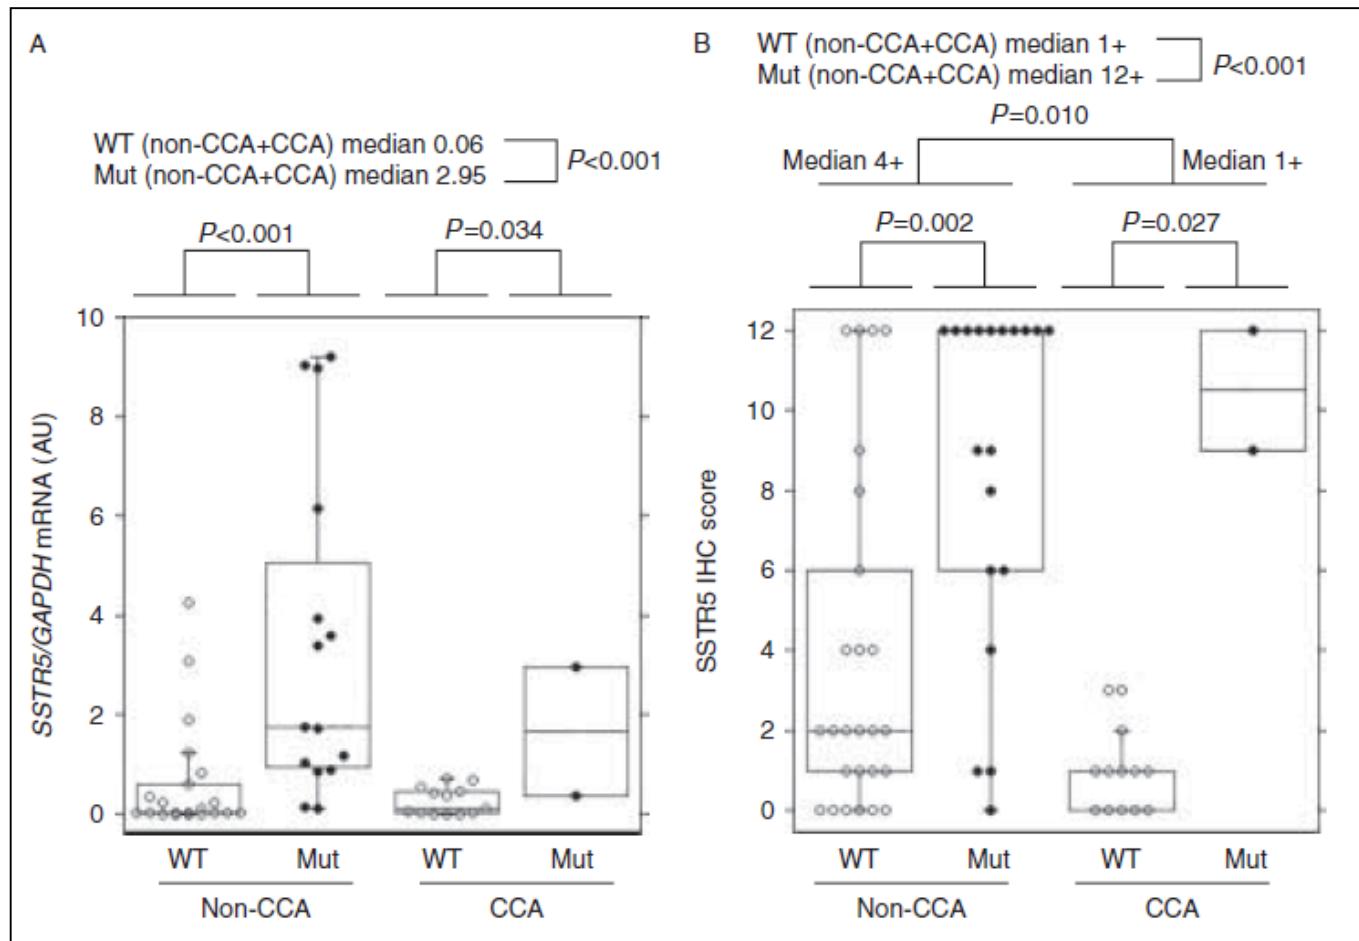

<i>Perez-Rivas, JCEM, 2015</i>	WT	<i>USP8</i> mut	P value
ACTH (pg/ml)	74 (IQR 68)	67 (IQR 57)	0.8
UFC (mcg/day)	380 (IQR 415)	370 (IQR 490)	0.6
F post-8mg DST (mcg/dl)	5.2 (IQR 6.8)	2.5 (IQR 2.5)	0.01
Post-op UFC	2.5 (IQR 6.8)	22.5 (241.3)	0.007
No post-op adr. insuff.	29%	51%	0.03

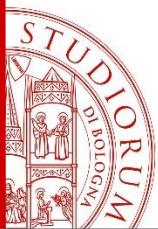

Mutazioni somatiche di *USP8*

Genotipo/fenotipo

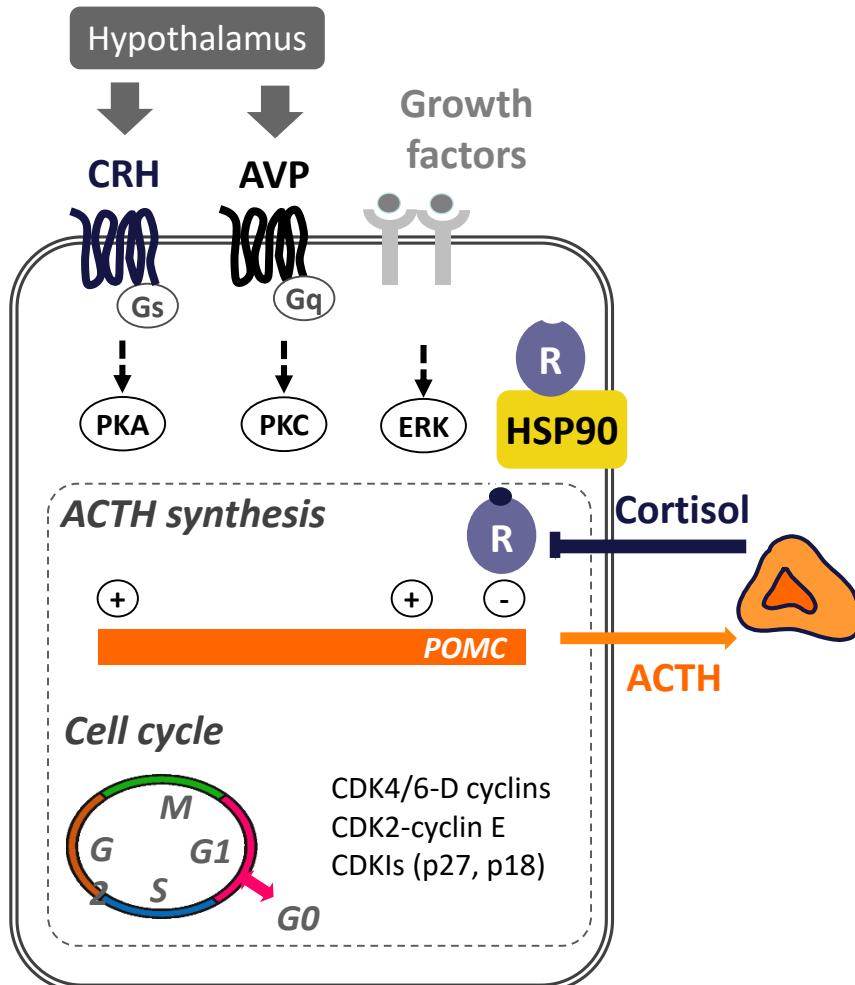

Le mutazioni di *USP8* sono più frequenti in tumori che esprimono SSTR5

Malattia di Cushing: background genetico

Update 2017

Dworakowska D, Eur J Clin Invest. 2012

Sbiera S, Trends Endocrinol Metab. 2015

Theodoropoulou M, Eur J Endocrinol. 2015

Gene	Ref.
<i>MEN1</i>	Stratakis, 2010 Matsuzaki, 2004

35-60%

Conclusioni e take home message

- Le tecniche di NGS hanno portato un sensibile avanzamento nello studio della patogenesi della sindrome di Cushing
- Le mutazioni di *PRKACA* sono l'evento predominante negli adenomi sporadici (30-60% dei casi)
- Le mutazioni di *ARMC5* (germinali + somatiche) sono un evento comune nelle iperplasie macronodulari (30% dei casi)
- Le mutazioni somatiche di *USP8* sono un evento frequente e specifico negli adenomi ipofisari ACTH-secernenti e hanno un ruolo patogenetico che coinvolge il signaling di EGFR
- Le mutazioni somatiche di *USP8* si associano ad un fenotipo clinico da definire e potrebbero avere nuove potenziali implicazioni farmacologiche

USP8 mutational status & clinical presentation

Table 2. Hormonal status in patients with wild type versus USP8-mutated adenomas.

	Wild-type	Mutated	P value
Preoperative variables			
Basal plasma ACTH, pg/ml (median, IQR)	74.0	67.65	67.0
Basal serum cortisol, µg/dl, (median, IQR)	24.1	14.8	21.6
Urinary free cortisol, µg/24h, (median, IQR)	379.6	415.0	370.0
Serum cortisol after 1/2 mg DMX, µg/dl, (median, IQR)	14.7	14.1	17.2
Serum cortisol after 8 mg DMX, µg/dl, (median, IQR)	5.2	6.75	2.5
			0.01
Postoperative variables			
Basal levels of plasma ACTH after OP, pg/ml, (median, IQR)	8.3	12.3	14.0
Minimum serum cortisol after OP, µg/dl, (median, IQR)	2.5	7	3.3
Urinary free cortisol after OP, µg/24h, (median, IQR)	2.5	6.0	22.5
Adrenal insufficiency, n (%)			
No	19	(29.2)	21
Yes	46	(70.8)	(51.2)
			0.03
			(48.8)
